

ibAcus

THE solution for back end data collection.

Components

Packaged within ibAcus are 3 coordinating components: **CServer**, provided free of charge, resides on a laptop or desktop computer and stores all the current and prior count data.

iReporter, also free and freely distributable is a stand alone report viewer that allows you or third parties to view and print reports.

iCounter resides on each hand held device and allows for data entry and wireless or batch uploading to CServer.

Accountability

You have the ability to store, report and track user counting progress in near real time, ensuring your agents are accountable. With built in independent auditing capabilities, you also have the tools to be accountable to your customers or auditors.

Hardware Independence

To support the objective of portability, our data model will allow support on virtually any 32 bit architecture meeting our minimum system requirements.

Versatility

CServer seamlessly integrates retail, barcode, and SKU, maintaining data in its natural hierarchy (sites, locations, sections and shelves) traceable to specific agents. Customers have the ability to enter their own margins and print a variety of customizable reports whenever they desire.

Import Scripts

iCountability adds seamless support of import scripting to CServer. Customer data import logic can be embedded in **discrete file** types. Utilizing open scripting languages like VB or Java Scripts, your local scripting guru can create a new import file type for a specific customer, adding to perhaps 100 other import file types from other customers. Field inventory managers are freed from the complexity of multiple customer import formats, saving valuable time on the job.

- ✓ *Import Scripting*
- ✓ *CServer (open distribution)*
- ✓ *Stand alone reporting (open distribution)*
- ✓ *Supports all forms of counting*
- ✓ *Access your data when you need to*
- ✓ *Wireless infrastructure*
- ✓ *Adaptable to meet your needs*
